Airbnb – Community-Based Sustainable Tourism Model

A comprehensive case study on transforming tourism through community partnerships and environmental responsibility

Computer Science and Engineering Department

Made with GAMMA

Problem Statement

Rapid tourism growth through digital platforms has created unprecedented challenges requiring immediate attention and innovative solutions.

Overtourism

Overcrowding of popular destinations straining local infrastructure and resources

Environmental Impact

Rising pollution levels, waste accumulation, and increased carbon emissions

Limited Local Benefits

Minimal economic benefits reaching indigenous communities and local businesses

Need for Change

Critical requirement for sustainable tourism models that balance growth with preservation

Made with GAMMA

Root Cause Analysis

Infrastructure Pressure

Overtourism overwhelming transportation, accommodation, and public services

Community Exclusion

Limited involvement of local communities in tourism planning and revenue sharing

Environmental Damage

Pollution, waste generation, excessive energy consumption, and ecosystem disruption

Economic Inequality

Unequal distribution of tourism revenue favouring large corporations over local artisans

Awareness Gap

Lack of knowledge among travellers about responsible and sustainable travel practices

Made with GAMMA

Proposed Solution

Airbnb Community-Based Sustainable Tourism Programme

01

Community Partnerships

Establishing direct collaborations with local communities to ensure meaningful participation

02

Eco-Friendly Practices

Implementing green hosting standards and sustainable operational guidelines

03

Responsible Behaviour

Educating travellers on cultural sensitivity and environmental responsibility

04

Balanced Benefits

Ensuring equitable distribution of tourism revenue among all stakeholders

Made with GAMMA

Local Experience Partnerships

Creating authentic connections between travellers and local communities whilst supporting traditional artisans and guides.

Local Cooking Classes

Hands-on culinary experiences with local chefs teaching traditional recipes and techniques

Cultural Heritage Tours

Guided explorations of historical sites and cultural landmarks by knowledgeable local guides

Traditional Craft Workshops

Interactive sessions where travellers learn indigenous crafts directly from skilled artisans

Made with GAMMA

Green Host Certification

A badge system incentivising hosts to adopt environmentally responsible practices and showcase their commitment to sustainability.

1

Waste Management

Implementing recycling programmes, composting organic waste, and reducing single-use plastics

2

Renewable Energy

Utilising solar panels, wind energy, or purchasing renewable energy credits for operations

3

Water Conservation

Installing low-flow fixtures, rainwater harvesting systems, and promoting water-saving habits

Made with GAMMA

Community Tourism Fund

Allocating 1–2% of booking revenue to support sustainable development initiatives that benefit both visitors and residents.

Waste Management Systems

Funding improved collection, recycling infrastructure, and public sanitation facilities to maintain cleanliness

Environmental Conservation

Supporting reforestation projects, wildlife protection programmes, and ecosystem restoration efforts

Cultural Heritage Preservation

Restoring historical monuments, supporting traditional arts, and documenting intangible cultural practices

Made with GAMMA

Sustainability Impact

Environmental

- Reduced pollution and carbon emissions
- Ecosystem protection and biodiversity conservation
- Improved waste management and recycling
- Lower water and energy consumption

Social

- Preservation of local culture and traditions
- Enhanced community engagement and participation
- Cultural exchange and mutual understanding
- Improved quality of life for residents

Economic

- Increased income for local communities
- Job creation in sustainable tourism sector
- Support for small businesses and artisans
- Long-term economic stability and growth

Made with GAMMA

Implementation Plan

Phase 1: Research

Community engagement and needs assessment through surveys, focus groups, and stakeholder consultations

1

2

Phase 2: Pilot Programme

Launch in selected destinations with monitoring systems to evaluate effectiveness and gather feedback

3

Phase 3: Expansion

Scale successful practices to additional regions based on pilot results and available resources

4

Phase 4: Continuous Improvement

Monitoring impact metrics, implementing improvements, and adapting strategies based on data

Made with GAMMA

Expected Outcomes & Conclusion

Reduced Environmental Impact

Lower pollution levels and preserved natural ecosystems through responsible practices

Enhanced Local Income

Significantly better economic benefits reaching local communities and artisans

Authentic Travel Experiences

Meaningful cultural exchange providing travellers with deeper understanding of local communities

Long-Term Sustainability

Establishing a replicable model for sustainable tourism development worldwide

> *"By empowering communities and prioritising environmental responsibility, we can transform tourism into a force for positive change."*
